## SUMMARY

A dedicated software development professional with a passion for building software operations that address real-world problems. Extensive experience in full-stack development has honed my skills in problem-solving, adaptability, communication, and critical thinking.

## WORK EXPERIENCE

### SDE Intern — ADMsoft

June 2025 - Present

#### *Flight Booking Portal*

- Engineered a flight booking system to handle real-world flight itinerary data, **processing an average 30–40k JSON key-value pairs per search**, and reducing query time by 35%.
- Configured system architecture and database management, implementing secure **user authentication with JWT and bcrypt**. This ensured 100% session protection across 500+ logins and improved system reliability.
- Technologies: React, Express, MySQL, Vultr.

#### *Crustworthy E-commerce Management System*

- Improved business insights and **increased efficiency by 30%** through the development of role-based dashboards and an order-tracking system. This enabled comprehensive monitoring of product sales, delivery, and customer metrics.
- Implemented real-time data synchronization with backend APIs using Axios interceptors, which **reduced API call failures by 25%** and improved data consistency.
- Technologies: React, FastAPI, SQLite, Vultr.

## PROJECTS

### Visual DB – Full Stack Web Application

- Developed a full-stack application using Spring Boot 3 and React.js to streamline data management, **improving CRUD operation speeds by 40%**.
- Integrated AWS S3 for external file storage, which **reduced backend storage usage by approximately 60%**.
- Technologies: Spring Boot 3, React.js, PostgreSQL, Amazon S3, Docker.

### Mail Server – Full Stack Email Management System

- Built a custom **SMTP-compatible email server** using **Node.js** and **Express.js** to simulate real-time email operations (send, receive, render).
- Designed and consumed a **RESTful API** from a **React.js** and **Tailwind CSS** frontend, achieving a responsive UI and **API latency of less than 200ms**, utilizing **SQLite** for lightweight persistent storage.
- Technologies: Node.js, Express.js, React.js, SMTP Protocol, SQLite, Tailwind CSS.

## RESEARCH AND PUBLICATIONS

### Automating Helmet Usage Detection: A YOLOv8-Based Framework

DOI:10.22214/ijraset.2024.61533

Feb 2024 - April 2024

- Utilized the YOLOv8 model for real-time helmet detection on Indian roads, leveraging a CNN-based approach.
- Achieved a high MAP (mean average precision) value up to 80%, particularly for critical classes like number plate, rider, and helmet for low-quality images.

## EDUCATION

### Pune Institute of Computer Technology

GPA: 8.65

Bachelor of Engineering in Computer Science and Engineering

Aug. 2021 - May 2025

## SKILLS

**Languages:** Java, Python, JavaScript

**Databases:** MySQL, PostgreSQL

**Frameworks and libraries:** Spring Boot, React.js, Next.js, Express.js, Node.js, and FastAPI

**Version Control, Cloud and Hosting Platforms:** Git/GitHub, AWS, Docker, cPanel.
